Medicare Enrollment, 1985

Annual Medicare Program Statistics

The Health Care Financing Administration (HCFA) is responsible for the Medicare program and Federal participation in State-operated Medicaid plans. HCFA's mission is to finance "...the timely and economic delivery of appropriate health care to eligible beneficiaries." HCFA reimbursement policies have significant and far-reaching effects on providers, beneficiaries, and payers. Understanding these effects and their causes is essential to the planning and implementation of cost-saving initiatives.

Within HCFA, the Bureau of Data Management and Strategy (BDMS) is responsible for the development of systems and computer programs to establish and maintain the national Medicare statistical files. BDMS develops and coordinates agency statistical methods for the economic analysis of health care financing issues and proposals.

This *Annual Medicare Program Statistics* report contains data on Medicare enrollment. The data can be useful to health care managers, planners, and researchers, particularly for those examining cost-saving alternatives for health care delivery methods, such as capitation.

Trends

Medicare enrollment

Medicare enrollment data provide information on the aged and disabled populations covered by the hospital insurance (HI) and supplementary medical insurance (SMI) programs.

Data on the characteristics of the enrolled population in 1985 are presented in this report. Changes in enrollment over the years are highlighted. Text tables are presented that include trend data and a variety of other enrollment data not included in the detailed tables. Counts of beneficiaries are as of July 1 of the years shown unless otherwise noted.

All persons

- On July 1, 1985, 31.1 million aged and disabled persons were enrolled for HI and/or SMI. At the beginning of the program in 1966, 19.1 million aged persons were enrolled in Medicare.
- Total enrollment in 1985 increased 2.1 percent over the 30.5 million enrollment in 1984.
- In 1985, Medicare enrollees residing in the United States represented 12.7 percent of the total resident population; in 1966, they represented 9.6 percent.
- More than 98 percent of the total Medicare population was enrolled for HI in 1985; more than 96 percent was enrolled for SMI.
- During 1985, 2.3 million persons were newly enrolled in HI and 2.3 million in SMI.
- In 1985, HI enrollment under Medicare terminated for 1.6 million persons—98.1 percent because of death. Under SMI, 95.4 percent were terminated because of death.

Aged persons

- Enrollment of aged persons under Medicare has increased at an average annual rate of 2.1 percent, from 19.1 million in 1966 to 28.2 million in 1985. The increase from 1984 to 1985 was 2.2 percent.
- Approximately 97 percent of the total U.S. population 65 years of age or over had some type of Medicare coverage in 1985.
- Persons eligible for social security benefits accounted for 82.1 percent of all aged HI enrollees in 1966 and 95.7 percent in 1985.
- Enrollment of the aged in HI grew from 19.1 million in 1966 to 27.7 million in 1985, a 2.0-percent annual rate of change. SMI enrollment grew faster. The increase from 17.7 million enrollees in 1966 to 27.3 million in 1985 represents a 2.3-percent annual growth rate.
- The number of aged persons with only SMI coverage rose from about 26,000 in 1966 to 493,000 in 1985, and now represents 1.7 percent of the total aged Medicare population.
- Under HI, persons 85 years of age or over accounted for 10.3 percent of the total enrollment of the aged in 1985, up from 6.2 percent in 1966. This age group also had the highest average annual percentage increase since 1966 (4.7 percent). Similar patterns emerged for the SMI program.

- In 1985, about 6 out of 10 aged enrollees under HI or SMI were female. Since 1966, the percentage of females enrolled has increased steadily. From 1966 to 1985, the annual rate of increase in females enrolled under SMI was 2.5 percent compared with 1.9 percent for males.
- From 1966 to 1985, aged HI enrollment increased faster for persons of races other than white (2.8 annual percent change) than for white persons (1.9 annual percent change). For both HI and SMI, persons of races other than white accounted for more than 9 percent of the aged Medicare population of known race.
- By region, the highest proportion (33 percent) of the aged U.S. Medicare population resided in the South; the lowest proportion (17 percent) resided in the West.
- From 1966 to 1985, enrollment growth of aged HI enrollees was greatest in the West (2.8 percent per year) and the South (2.7 percent per year) and lowest in the Northeast (1.2 percent per year).
- Under SMI, growth was greatest in the South and West (3.1 percent per year) and lowest in the Northeast (1.5 percent per year).
- More than 54 percent (14.7 million) of the aged HI population resided in metropolitan areas having a central city.
- During 1985, nearly 2 million aged persons were newly enrolled in HI and in SMI.

Disabled persons

- In 1985, 2.9 million disabled persons were enrolled for HI, compared with 1.7 million when coverage started in 1973.
- Although the annual rate of growth in the number of aged enrollees has remained relatively constant (about 2 percent a year), the pattern for the disabled has been erratic. The rate of change for the disabled peaked in 1975, then declined rapidly, and for the first time since 1981 has shown a positive increase (Figure 1).
- In 1985, 50.6 percent of disabled enrollees were 55–64 years of age; 30.9 percent were 60–64 years of age.
- From 1973 to 1985, enrollment of disabled beneficiaries under 35 years of age increased faster than enrollment in any other age category.
- Unlike the aged Medicare population, a majority (64 percent) of disabled enrollees were male. However, since 1973, the percentage of female enrollees has increased slightly.
- More than 8 out of 10 persons in the disabled Medicare population were white. Enrollment of disabled persons of minority races has doubled from 1973 to 1985.
- More than 53 percent of disabled HI enrollees lived in metropolitan areas having a central city; more than 1 out of 3 resided in the South.
- Nearly 7 percent of disabled enrollees attained 65 years of age during 1985 and were automatically converted to aged status.
- About four-tenths of 1 percent of disabled enrollees recovered from disabilities, and their coverage by Medicare was terminated.

Persons enrolled under State buy-in agreements

- In 1985, 2.9 million persons were enrolled for SMI under State buy-in agreements. They constituted 9.7 percent of the total SMI population.
- For aged beneficiaries, the number of SMI "buy-ins" increased from 1.1 million in 1967 to 2.2 million in 1985. In 1967, buy-ins represented 6.3 percent of the total aged SMI population; in 1985, about 8.2 percent.

- Disabled beneficiaries enrolled under State buy-in agreements have grown in number from one-quarter million in 1973 to two-thirds million in 1985. In 1973, buy-ins represented 16.0 percent of the U.S. disabled SMI population; in 1985, 24.9 percent.
- In 1985, the States having the highest percentages of buy-ins relative to their total SMI populations were Mississippi (26.1 percent), Alabama (20.2 percent), and California (19.4 percent). Those with the lowest percentages were New Hampshire (2.6 percent), Minnesota (2.9 percent), Connecticut (3.2 percent), and Nebraska (3.2 percent).

Definitions

Program-related terms

Aged beneficiaries—Persons 65 years of age or over entitled to monthly Social Security Administration (SSA) benefits or payments from the Railroad Retirement Board (RRB), persons uninsured for SSA or RRB benefits but transitionally insured for Medicare, and persons 65 years of age or over not included in the above groups who purchase health insurance and supplementary medical insurance coverage. Included are persons 65 years of age or over identified as having end stage renal disease (ESRD).

Disabled beneficiaries—Persons under 65 years of age entitled to SSA disability benefits for at least 24 months, including those receiving SSA disability benefits and identified as having ESRD, and those deemed disabled solely because of ESRD. Disability beneficiaries are further classified according to the type of disability entitlement under SSA, that is, disabled workers, adults disabled as children, and disabled widows and widowers.

Change in benefit status—When disabled beneficiaries attain age 65 they are reclassified as aged persons.

Type of coverage—Medicare provides two basic types of insurance: a hospital insurance (HI) plan and a voluntary supplementary medical insurance (SMI) plan. Most aged persons may be covered by either one or both plans. However, those aged persons paying a premium for HI coverage must also enroll for SMI coverage. Disabled persons may not enroll for SMI coverage without HI coverage, except in circumstances where entitlement was awarded through government error that warranted equitable relief.

Mid-point enrollment—Enrollment as of July 1 has been chosen as the denominator for utilization rates published in this Medicare data series. The choice was based on the similarity of the July 1 enrollment to a 12-month average enrollment.

Persons ever enrolled—Persons eligible for benefits at any time during a calendar year.

Geographic classifications

All areas—Consists of the United States, Guam, Puerto Rico, Virgin Islands, other outlying areas, and foreign countries.

All other areas—Consists of American Samoa, Canton Island, Caroline Islands, Guam, Northern Mariana Islands, Marshall Islands, Midway Islands, Virgin Islands, and Wake Islands.

County—The primary divisions in most States are counties. In Louisiana, however, divisions are called parishes, and in Puerto Rico, they are called municipios. Guam and the Virgin Islands are not subdivided. Alaska is divided into 29 census divisions which are used as the equivalents of counties. A number of cities that are independent of county organizations are reported separately in Maryland, Missouri, Nevada, and Virginia.

County unknown—Persons whose mailing addresses do not permit identification of county of residence are included in figures for States but not in figures for metropolitan and nonmetropolitan counties, or for MSA's. There is one exception: where there is only one type of county in a State, figures for county unknown are assigned to that type.

Metropolitan and nonmetropolitan counties—The division of counties into metropolitan and nonmetropolitan groups is based on the list of metropolitan statistical areas (MSA's), published by the Office of Management and Budget. Except in New England, each MSA includes a county that contains a central city of at least 50,000 inhabitants, based on the 1980 census. In addition, contiguous counties are included in the MSA if they meet certain criteria of economic and social integration with the central city. In New England, an MSA consists of towns and cities rather than counties. However, the mailing address in the master enrollment record file is coded only for State and county. Therefore, for New England, the MSA was replaced by the New England County Metropolitan Area (NECMA), which is defined in terms of whole counties. Metropolitan counties are those counties that are included in an MSA or a NECMA. These counties are further divided into those with a central city and those without a central city. Nonmetropolitan counties are those that fall into neither an MSA nor a NECMA.

Place of residence—The beneficiary's place of residence classification is a mailing address, not necessarily an actual place of residence. Some beneficiaries have their checks mailed to a post office or to a representative payee in a State or county that may differ from the residence of the beneficiary. Temporary or permanent changes in address are recorded as beneficiaries report them. Only the most recently reported mailing address is in the master enrollment record file. The address in the file on the date of tabulation is used for all tables in Medicare Enrollment, 1985.

State unknown—There were 19,000 aged and 3,000 disabled persons with unknown State of residence recorded in the master enrollment record file in 1985. Most of these entries for the aged were the result of processing errors of codes for State or foreign countries. Most of the unknown State of residence records for the disabled were incomplete temporary enrollment records established for persons with end stage renal disease.

United States—Consists of the 50 States, the District of Columbia, and residence unknown.

Demographic classifications

Age—Ages for all persons alive at the end of a year are calculated as of July 1 of that year. For persons dying during the year, ages are calculated as of the first day of the month of death. In tables showing enrollment by month of coverage, ages for all persons alive at the end of a year are calculated as of the reference month shown in the body of the table.

Race—Categories include white, all other races, or unknown, as entered into the master enrollment record file from basic records completed by the beneficiary. A race distribution is shown for an MSA if at least 10 percent of the hospital insurance beneficiaries are classified as "all other races."

Race unknown—Race unknown, whether or not displayed in a table, is included in the “all persons” or equivalent totals. On July 1, 1985, the number of aged HI beneficiaries without a race designation was about 815,000. Race was not known for almost 58,000 disabled

persons (primarily RRB beneficiaries). The relatively high proportion of RRB beneficiaries without a race designation is because of incomplete data exchange procedures.

Sex—As recorded in the master enrollment record file.
